PROFESSIONAL SUMMARY

Full stack developer with 6+ years in web development, the last five of them full stack, building applications end to end in TypeScript: React and Next.js on the client, Node.js and Express REST APIs on the server, plus Java and Spring Boot services, over PostgreSQL and MongoDB and deployed on AWS. Comfortable owning a feature from data access and API contract through to the interface, and equally comfortable joining an existing codebase and shipping into it.

Track record delivering complex platforms for enterprise clients, including a major bank, a credit card network and a Fortune 500 audit firm, where performance, security and accessibility were enforced requirements rather than goals. Experience spans real-time systems over WebSockets, operational dashboards, e-commerce flows and cross-platform mobile with React Native. Day to day this has meant code review, technical design discussions, automated testing in CI, production support, and Scrum work alongside product owners and UX designers. Spanish native, English C1.

TECHNICAL SKILLS

Languages: TypeScript · JavaScript · Java · SQL · HTML5 · CSS / SCSS / SASS · Object-oriented programming and design

Frontend: React · Next.js · Redux · Redux Toolkit · redux-saga · MobX · Component architecture · Reusable component libraries · Accessibility · Frontend performance · React Native (iOS/Android)

Backend: Node.js · Express · REST API design and integration · WebSockets · Java / Spring Boot · Third-party and internal service integration

Data & Cloud: PostgreSQL / SQL · MongoDB · AWS (EC2, S3, Lambda) · CI/CD pipelines · Git

Quality & Practice: Code review and pull requests · Technical design · Automated E2E testing in CI (Cypress, TestCafe) · Production incident resolution · Agile / Scrum · Mentoring junior developers

AI: AI-assisted development (Claude Code, Cursor) · LLM API integration · Workflow automation (n8n)

PROFESSIONAL EXPERIENCE

Independent | Barranquilla, Colombia

Software Engineer | 2026 – Present

Independent development work and self-directed study in AI application engineering

- Built a conversational assistant delivered over WhatsApp for a local business, integrating an LLM API into its existing workflow through n8n; now used daily by several companies and running in production for 8 months.
- Studying retrieval-augmented generation, LangChain and vector stores, applying them to tooling already in use.

Perficient | Remote

Full Stack Developer | 2021 – 2026

Global digital consultancy: enterprise platforms in banking, payments and professional services

- Developed frontend and backend features for enterprise products, designing and consuming REST APIs on Node.js and Spring Boot over PostgreSQL, with React, Next.js and TypeScript on the client.
- Built a real-time collaborative tax filing platform supporting concurrent multi-user editing over native WebSockets, with Redux and redux-saga handling the incoming event stream and shared state under heavy concurrency.
- Delivered complex multi-step forms and new features for a major bank's public site under strict validation, accessibility and performance requirements.
- Built an internal platform managing the full lifecycle of security certificates for a credit card network, with role-based access and audit requirements, and contributed to its JavaScript to TypeScript migration on the live codebase.
- Maintained and extended existing production applications, including a Fortune 500 audit firm's internal platform used daily by its teams.
- Mentored four junior developers over a year, guiding their technical growth and career development plans.

- Reviewed code, took part in technical design discussions and maintained automated Cypress E2E suites in CI to protect release quality.
- Resolved production incidents covering database and server-side causes, including work outside business hours when impact required it.
- Worked in Scrum teams with product owners and UX designers, turning requirements into shipped features.

Area Movil | Barranquilla, Colombia

Full Stack Developer | 2021

Cross-platform field operations product

- Built web, mobile and backend features across multiple internal teams: an Angular console for coordinators, a React Native app for field staff on iOS and Android, and the server-side APIs behind both.
- Designed and integrated REST endpoints on Spring Boot with PostgreSQL, keeping web and mobile clients in sync.

Lokafy | Remote (Toronto, Canada)

Frontend Developer | 2020 – 2021

Canadian travel-tech startup

- Led the frontend of a platform migration from a Django monolith to a Nuxt.js architecture, working inside the live system while shaping its replacement and enabling independent deployments.
- Integrated the new client with existing Django/PostgreSQL REST APIs, improving maintainability and page performance.

LYA Electronics | Barranquilla, Colombia

Frontend Developer | 2020

IoT streetlight monitoring platform

- Designed and built from scratch the real-time dashboard for monitoring a fleet of IoT-connected devices: live status tracking and remote control of individual units, in React over a Node.js and MongoDB backend.

SELECTED PROJECTS

- Collaborative Tax Filing Platform (Next.js, Node.js, native WebSockets, Redux Toolkit, redux-saga, Cypress): real-time platform allowing multiple users to edit the same filing simultaneously, with live synchronization of complex shared state.
- Bank Public Website (React, MobX, Node.js, PostgreSQL): new features and complex multi-step forms for a major bank's public-facing site, under strict validation, accessibility and performance requirements.
- Security Certificates Platform (React, Redux, TypeScript, Spring Boot, PostgreSQL, TestCafe): internal platform managing the full lifecycle of security certificates for a credit card network, with role-based access and audit requirements.
- Multi-Station Fuel Operations Platform (React, Redux, Node.js, MongoDB): operations system letting a central team monitor and control fuel distribution across multiple physical locations in real time.
- Auto Parts Marketplace (React, Redux, Cypress): reusable component library and end-to-end sales flows for an e-commerce platform, with Cypress covering the critical purchase journeys.
- Field Operations & Surveys Platform (Angular, React Native, Spring Boot, PostgreSQL): cross-platform product pairing a coordinator web console with a mobile app for field staff over a shared REST API.
- IoT Streetlight Monitoring (React, Redux, Node.js, MongoDB): real-time monitoring dashboard for connected infrastructure, built from scratch, with live device status and remote control.
- WhatsApp Conversational Assistant (n8n, LLM API): assistant answering customer questions from each business's own content and booking appointments, in daily production use for 8 months.

EDUCATION AND LANGUAGES

B.Sc. Electronic Engineering, Universidad del Norte, Barranquilla, Colombia | 2015 – 2020

Spanish: Native | English: C1, written and conversational (6 years working daily with U.S. and Canadian clients and engineering teams)
